

CHAPTER 2

SELF MANAGEMENT SKILLS

INFORMATION TECHNOLOGY (402)
ARTIFICIAL INTELLIGENCE (417)

STRESS

Stress is a condition that makes a person tensed and tired . It affects both our body and mind.

Large amount of stress can cause fatigue , depression , sickness and unable to concentrate.

STRESS

There are various factors that can cause stress like unrealistic expectations, demands and threats.

STRESS

Stress can be divided in two groups :

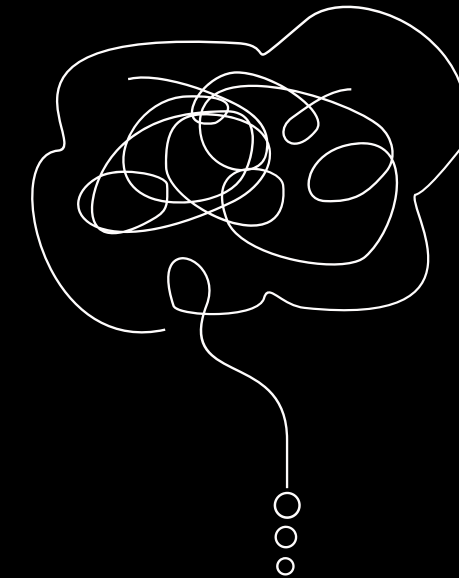

[Positive stress]

Good stress is called
"EUSTRESS"

[Negative stress]

Bad stress is called
"DISTRESS"

DISTRESS :

Due to distress people tend to be depressive , unmotivated which can sometimes lead to self harm practices , concentration problems and more.

Types Of Stress

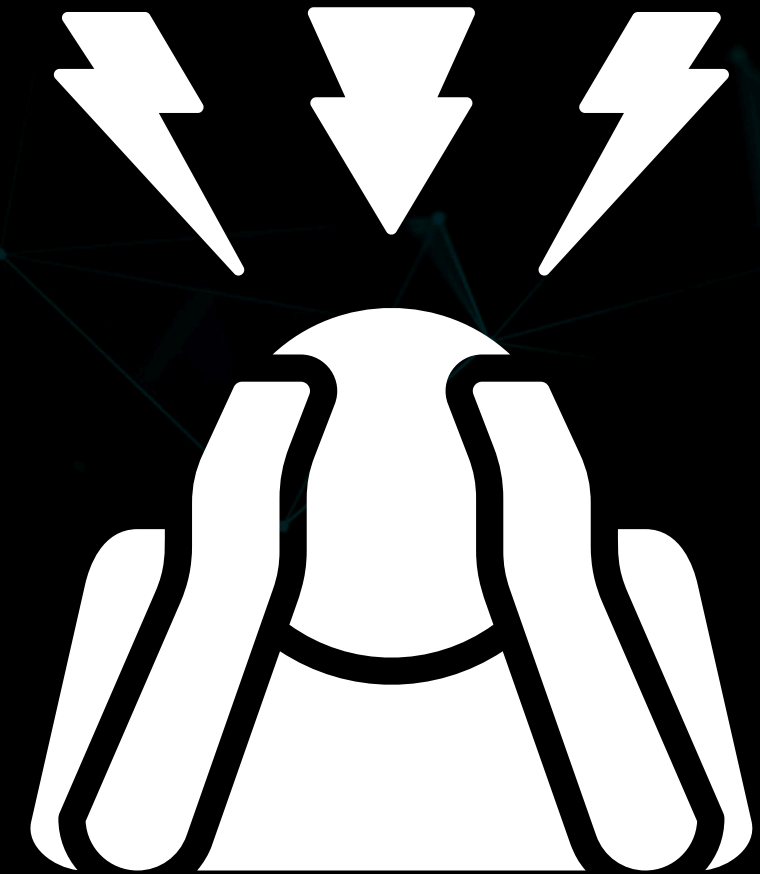

Stress can be stimulated due to various factors including external factors as well as internal factors.

We can classify stress into four different types :

Types Of Stress

1. Internal Stress :

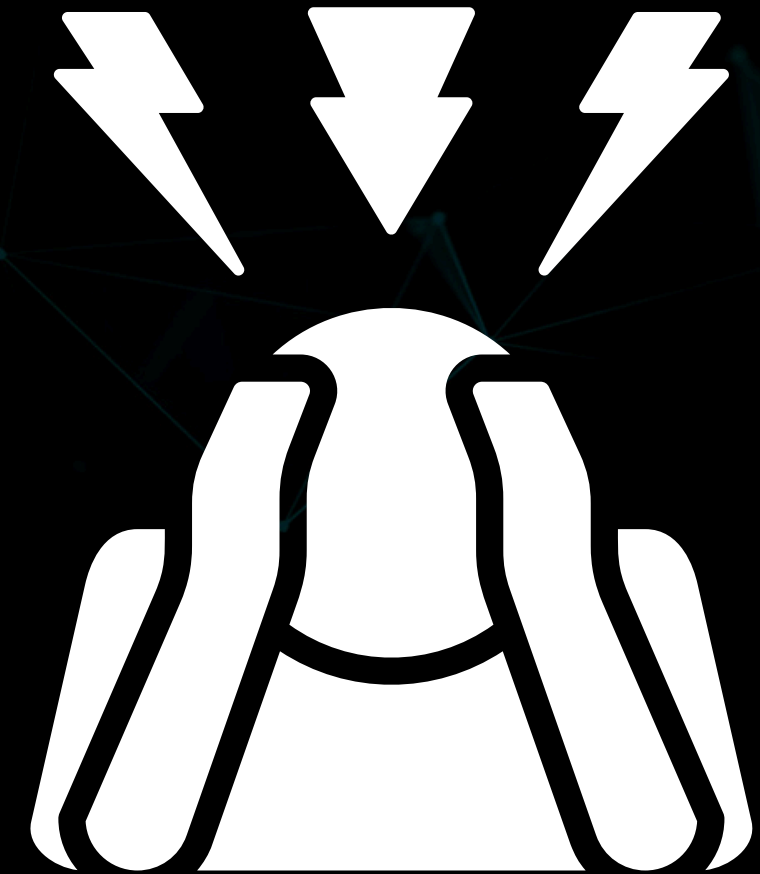

Internal stress refers to the kind that stay within our own mind which makes it the most important type to manage because it keeps piling up. Internal stress can cause tension , insecurity and more.

Types Of Stress

2. Survival Stress :

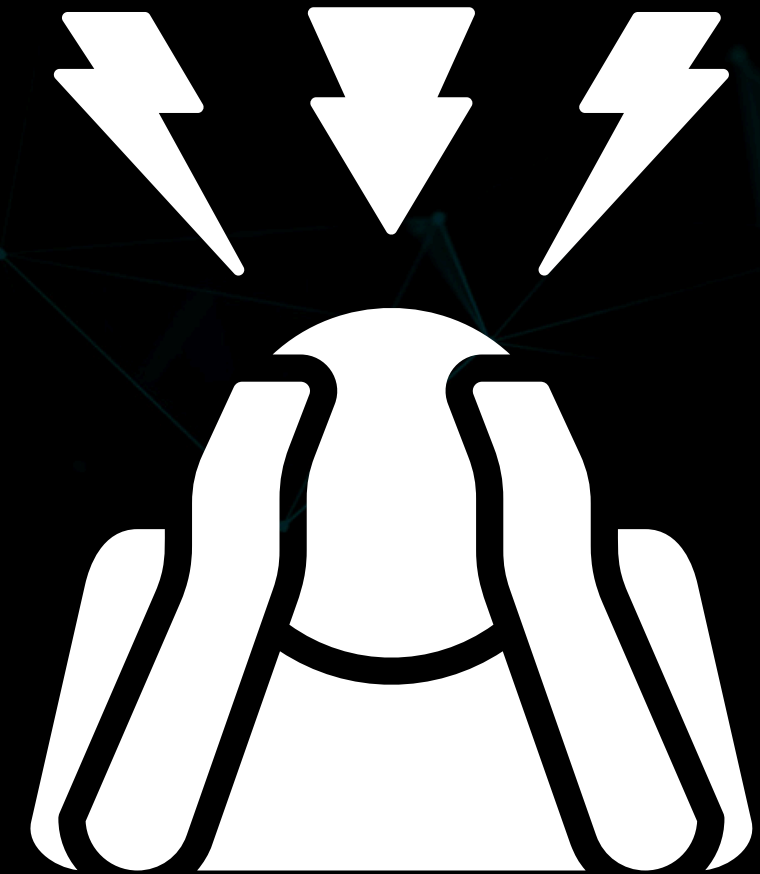

Survival stress is common in response to danger in humans and animals. Physical responses while being in situation of danger before getting hurt. Burst of energy to survive or to escape also termed as “**fight - or - flight**” response.

Types Of Stress

2. Survival Stress :

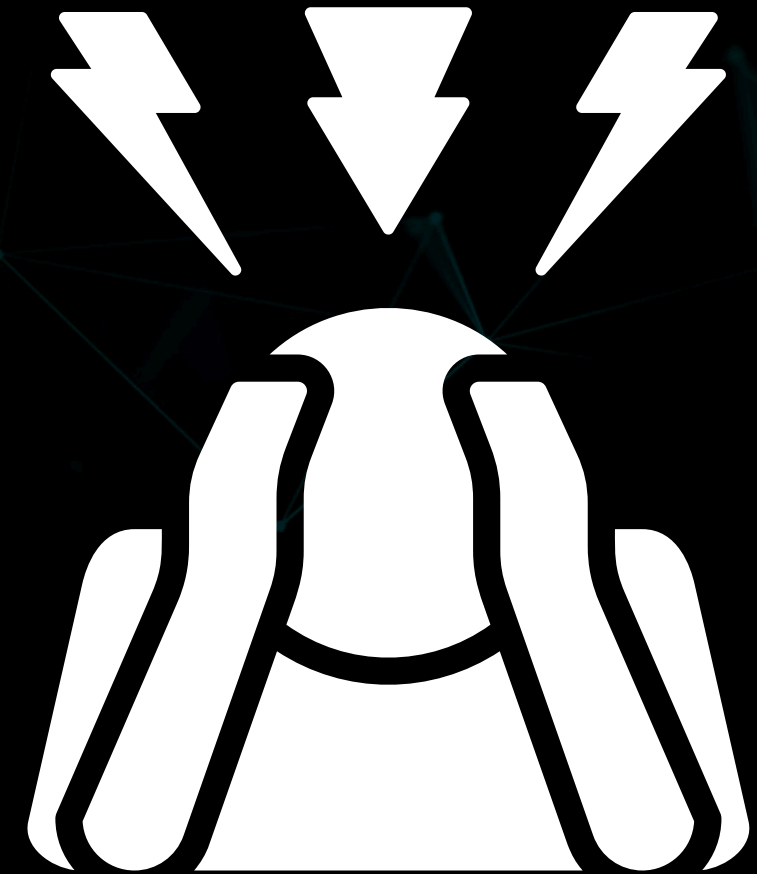

Survival stress is common in response to danger in humans and animals. Physical responses while being in situation of danger before getting hurt. Burst of energy to survive or to escape also termed as “**fight - or - flight**” response.

Types Of Stress

3. Environmental Stress :

The environment around us that cause stress such as noise , pollution , crowd , family can be controllable or may be out of our hands. Either learn to deal with it or totally avoid it .

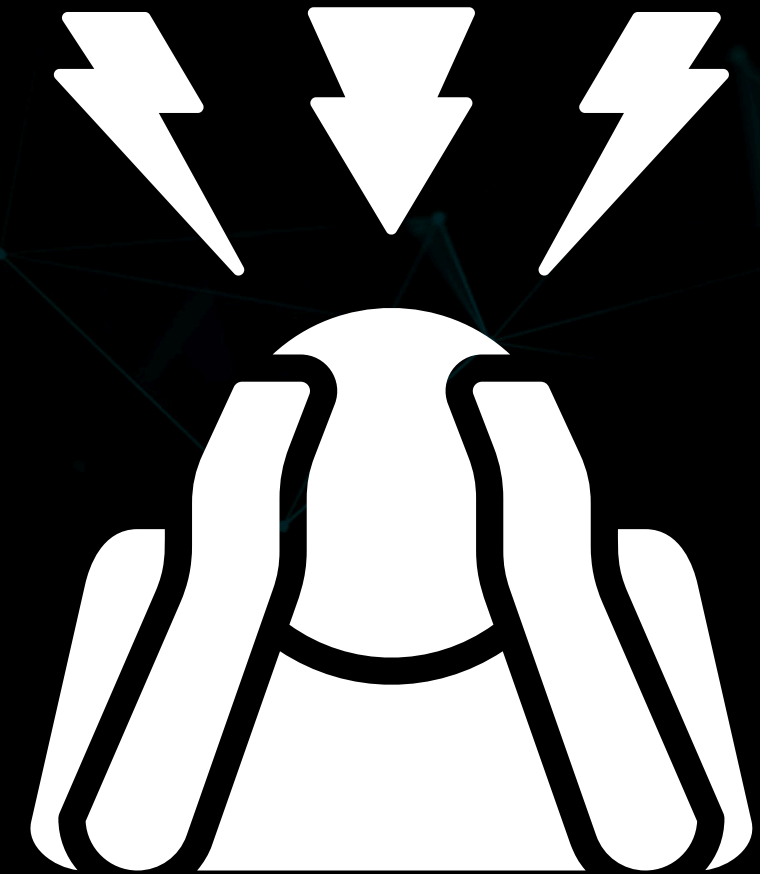

Types Of Stress

4. Fatigue Related Stress :

When stress builds up over a long period of time , by working too long at workplaces , student life or even by working out too long.

Managing your time is really important to know when you should “**Stop**”.

Identification

To find the “cure” one must know the “cause” first.

There are various reasons that may cause stress and being aware is the first step to treat yourself.

Identification

There are many techniques to manage stress specially chronic stress. To maintain stress we should first know the cause.

Identification

Identifying symptoms of stress : sometimes identification gets hard as we get used to it.

Alarm response : body itself responds to stress by causing nervous shaking , uncontrollable heartbeat , distress and more.

Stress Management

Stress management refers to managing all the cause of stress and making mind and body less tensed. It helps in maintaing physical , mental and emotional stability.
