TOO TOUGH TO HANDLE

“As soon as I saw the paper, I was shocked. There were barely any questions from the textbooks or from previous years' question papers. My maths paper is a disaster — Manideep K

“Those who didn't do well need not worry. They'll get another chance in the second board exam. They should not allow one bad performance to affect all their exams — Ch Rekha Rao | CBSE SCHOOL ADMINISTRATOR

Hyderabad: Class 10 exams for students of the Central Board of Secondary Education (CBSE) began on a tough note, with many students and teachers in Hyderabad claiming that the maths paper was both more difficult and lengthier than usual.

According to them, similar concerns were aired by students across India after writing the paper on Feb 17.

REAL NUMBERS

Lecture #1

L-2 → App

#LCM (Least Common Multiple)

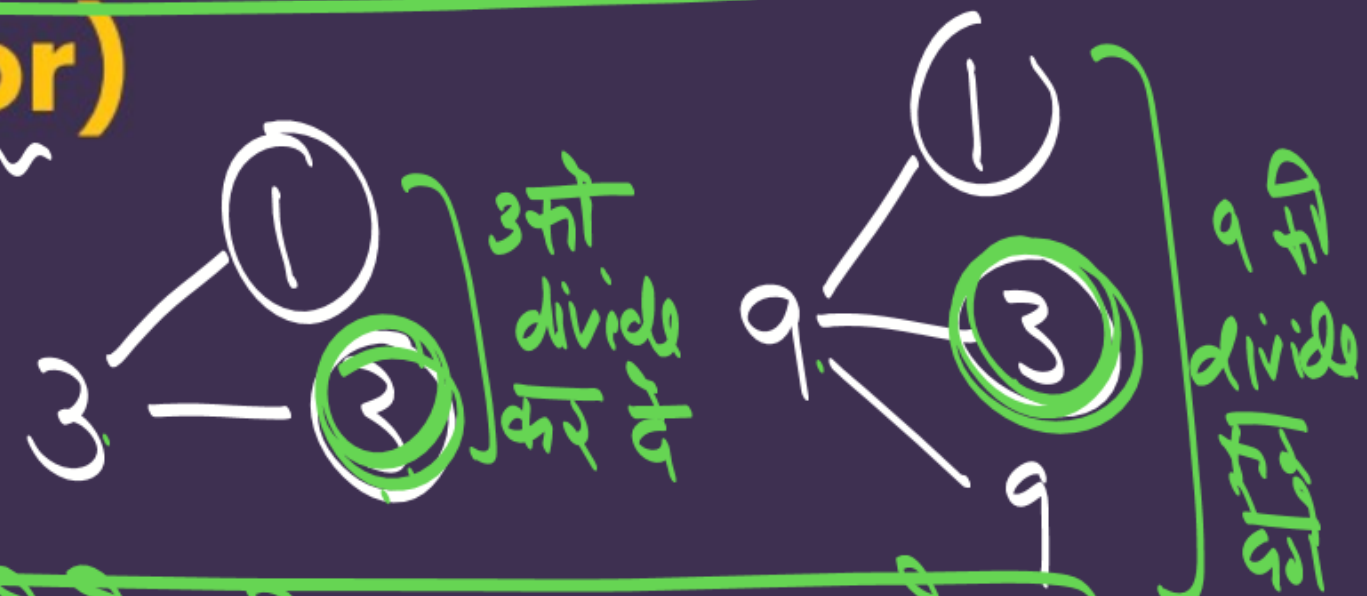

$$\begin{array}{l} 3 \\ 9 \end{array} \rightarrow \boxed{\text{LCM}(3, 9) = 9}$$

div. by 3
 $3 = 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, \dots$
 $9 = 9, 18, 27, 36, 45, 54, \dots$

→ वो सबसे छोटा No. जो दोनों से divide हो जाए।

#HCF (Highest Common Factor)

$$\begin{array}{l} 3 \\ 9 \end{array} \rightarrow \boxed{\text{HCF}(3, 9) = 3}$$

→ वो सबसे बड़ा No. जो दोनों को divide कर दें।

Aasan Tarika:-

$$\begin{aligned} 3 &= 3 \times 1 = 3^1 \times 1^1 \\ 9 &= 3 \times 3 \times 1 = 3^2 \times 1^1 \end{aligned}$$

$$\text{HCF}(3, 9) = \left[\text{common factors} \right] = 3 \times 1 = \textcircled{3}$$

$$\text{LCM}(3, 9) = 3^2 \times 1^1 \Rightarrow \textcircled{9}$$

3	3
	1

3	9
3	3
	1

#LP: Find the LCM and HCF using prime factorisation:

(i) 32 and 54

2	54
3	27
3	9
3	3
	1

$$32 = 2 \times 2 \times 2 \times 2 \times 2 \Rightarrow 2^5$$

$$54 = 2 \times 3 \times 3 \times 3 \Rightarrow 2^1 \times 3^3$$

$$\text{HCF} = 2 \Rightarrow 2$$

$$\text{LCM} = 2^5 \times 3^3 \times 1 \Rightarrow 32 \times 27$$

2	32
2	16
2	8
2	4
2	2
	1

$$\Rightarrow 864$$

(ii) 155 and 1385

$$155 = 5 \times 31$$

$$1385 = 5 \times 277$$

$$\text{HCF} = 5$$

$$\text{LCM} = 5 \times 31 \times 277 = 42935$$

5	1385
277	277
	1

5	155
31	31
	1

#LP: Find the smallest number which is divisible by 32 and 54.

$$\rightarrow \text{LCM}(32, 54) = 864$$

#LP: Find the largest number that divides 155 and 1385.

$$\rightarrow \text{HCF}(155, 1385) = 5 \checkmark$$

#LP: The LCM of three numbers 28, 44, 132 is:

(A) 258

(B) 231

(C) 462

(D) 924

2	132
2	66
3	33
11	11
	1

$$28 = 2 \times 2 \times 7 \Rightarrow 2^2 \times 7^1$$

$$44 = 2 \times 2 \times 11 \Rightarrow 2^2 \times 11^1$$

$$132 = 2 \times 2 \times 3 \times 11 \Rightarrow 2^2 \times 3^1 \times 11^1$$

$$\begin{aligned} \text{LCM} &= 2^2 \times 7^1 \times 11^1 \times 3^1 \\ &\Rightarrow 4 \times 7 \times 11 \times 3 = \underline{\underline{924}} \end{aligned}$$

[CBSE 2024]

2	28
2	14
7	7
	1

2	44
2	22
11	11
	1

→ Lally Problem
#LP: The HCF of $3^7 \cdot 7^3$ and $3^3 \cdot 7^7$ is:

[CBSE 2026]

- (a) 1
- (b) 3.7
- (c) $3^3 \cdot 7^3$ ✓
- (d) $3^7 \cdot 7^7$

$$3^7 \cdot 7^3 \Rightarrow \underbrace{3 \times 3 \times 3 \times 3 \times 3 \times 3 \times 3}_{\text{7 factors of 3}} \times \underbrace{7 \times 7 \times 7}_{\text{3 factors of 7}}$$
$$3^3 \times 7^7 \Rightarrow \underbrace{3 \times 3 \times 3}_{\text{3 factors of 3}} \times \underbrace{7 \times 7 \times 7 \times 7 \times 7 \times 7 \times 7}_{\text{7 factors of 7}}$$

$$\text{HCF} \Rightarrow 3 \times 3 \times 3 \times 7 \times 7 \times 7$$

$$\Rightarrow 3^3 \times 7^3$$

#LP: If $x=ab^3$ And $y=a^3b$, where a and b are prime numbers, then
[HCF (x,y) - LCM (x,y)] is? [CBSE 2025]

A. $1-a^3b^3$ ✗

B. $ab(1-ab)$

C. $ab - a^4b^4$ ✗

☒ D. $ab(1-ab)(1+ab)$

$$x = a^1b^3$$

$$y = a^3b^1$$

$$\text{HCF}(x,y) = ab$$

$$\text{LCM}(x,y) = a^3b^3$$

$$\begin{aligned}\text{Final Ans} &\rightarrow \text{HCF} - \text{LCM} \\ &\Rightarrow a^1b^1 - a^3b^3\end{aligned}$$

$$\Rightarrow ab(1-a^2b^2)$$

$$\Rightarrow ab \left[(1)^2 - (ab)^2 \right]$$

$$\begin{aligned}&A^2 - B^2 \\ &(A+B)(A-B)\end{aligned}$$

$$\Rightarrow \boxed{ab(1+ab)(1-ab)}$$

1 PI $\rightarrow$ Q 3, 6, 7

1 PII $\rightarrow$ 4

2 P II $\rightarrow$ Q 7
