WPP (Weekly Practice Paper) - 1

Made by Digraj Singh Rajput

CLASS X
SOCIAL SCIENCE - ECONOMICS
CHAPTER - DEVELOPMENT

Time Allowed: 1 Hours
Marks: 30

Maximum

General Instructions:

- I. This question paper is divided into four sections-Section A, B, C and D.
- II. All questions are compulsory.
- III. **Section-A:** Question no. 1 to 5 are objective type questions of 1 marks each.
- IV. **Section-B:** Question no. 6 to 8 are defined type questions, carrying 2 marks each. The answer to each question should not exceed 40 words.
- V. **Section-C:** Question no. 9 to 11 are Short answer type questions, carrying 3 marks each. The answer to each question should not exceed 80 words.
- VI. **Section-D:** Question no. 12 and 13 are Long answer type questions, carrying 5 marks each. The answer to each question should not exceed 120 words.

All the best!!

SECTION-A
Objective Type Questions

1 X 5 = 5

1. What are not the developmental goals of landless rural labourers?

- (a) More days of work and better wages
- (b) Acquirement of land for self tilling
- (c) Tax rate should to be reduced
- (d) Self-reliance

2. Life expectancy at birth means -

- A. Average expected length of life of a person at the time of birth
- B. Average expected length of life of a person at the time of death
- C. Average expected length of a child at the time of birth
- D. None of the above

3. Assertion/Reason -

Assertion (A): A high average income is not indicative of the overall well-being or human development in a country.

Reason (R): Average income does not cover indicators like level of literacy rate, health facilities and public facilities in a country.

Codes:

- A. Both A and R are true, and R is the correct explanation of A.
- B. Both A and R are true, but R is not the correct explanation of A.
- C. A is true, but R is false.
- D. A is false, but R is true.

4. Which of these statements about national development is TRUE?

- A. Only countries with a varied population will have high national development.
- B. Different development goals may be conflicting for a country's national development.
- C. Only one attribute can be used to compare the national development of two countries.
- D. National development can be measured by calculating the total income of the population.

5. The most useful measure for comparison between countries is.

- (a) Total income
- (b) National income
- (c) Average income
- (d) Countries GDP

SECTION-B

Define Type Questions

2 X 3 = 6

Write a short note on:

- 6. Infant mortality rate .
- 7. Per Capita Income.
- 8. BMI

SECTION-C
Short Type Questions

3 X 3 = 9

9. “What may be development for one may not be development for the other. It may even be destructive for others.” Analyze the statement and give an appropriate example.
10. What do you mean by public facility? Explain its importance. .
11. “We have not inherited the world from our forefather. We have borrowed it from our children”. Explain?

SECTION-D
Long Type Questions

5 X 2 = 10

12. Suggest some developmental goals for your locality or place you are residing?
13. How do we compare different countries? Is there any limitation in the attribute used by the World Bank to compare the countries? Explain.

SECTION-A Objective Type Questions

1. What are not the developmental goals of landless rural labourers?

- (a) More days of work and better wages ✓
- (b) Acquirement of land for self tilling ✓
- (c) Tax rate should to be reduced
- (d) Self-reliance ✓

Ans. (c) Tax rate should to be reduced

SECTION-A Objective Type Questions

2. Life expectancy at birth means -

- A. Average expected length of life of a person at the time of birth
- B. Average expected length of life of a person at the time of death
- C. Average expected length of a child at the time of birth
- D. None of the above

Ans. A. Average expected length of life of a person at the time of birth

SECTION-A Objective Type Questions

3. Assertion/Reason -

Assertion (A): A high average income is not indicative of the overall well-being or human development in a country.

Reason (R): Average income does not cover indicators like level of literacy rate, health facilities and public facilities in a country.

Codes:

- A. Both A and R are true, and R is the correct explanation of A.
- B. Both A and R are true, but R is not the correct explanation of A.
- C. A is true, but R is false.
- D. A is false, but R is true.

Ans. A. Both A and R are true, and R is the correct explanation of A.

SECTION-A Objective Type Questions

4. Which of these statements about national development is TRUE?

- A. Only countries with a varied population will have high national development. ✗
- ☒ B. Different development goals may be conflicting for a country's national development. ✓
- C. Only one attribute can be used to compare the national development of two countries. ✗
- D. National development can be measured by calculating the total income of the population. ✗

Ans. B. Different development goals may be conflicting for a country's national development.

SECTION-A Objective Type Questions

5. The most useful measure for comparison between countries is.

- (a) Total income ✗
- (b) National income ✗
- ~~(c) Average income~~
- (d) Countries GDP ✗

Ans. (c) Average income

SECTION-B Define Type Questions

6. Infant mortality rate.

Ans. The number of children dying under the age of one year in a given year per 1,000 live births in the same year is known as Infant mortality rate.

This rate is also used as an indicator of the level of health in a country. As in kerala it was 7 but in haryana Infant mortality rate was 30 nearly three times more than karela. It shows that Kerala has good health facilities.

SECTION-B Define Type Questions

7. Per Capita Income.

Ans. The total income earned by each person in a country is known as per capita income or average income. It is calculated by dividing the total income of the country by the total number of people. $(\text{Total income} / \text{Total population} = \text{Per capita income})$

It is used for comparing the states within the country or different countries on the basis of income. The countries with higher per capita income are more developed than countries with less per capita income.

SECTION-B Define Type Questions

8. BMI

Ans. Body Mass Index is used for measuring the nourishment level in a child. It is calculated by dividing the weight in kg by the square of the height in metres and categorising them as underweight, normal weight, overweight, and obese.

$$\text{BMI} = \frac{\text{weight (kg)}}{\text{height (m)}^2}$$

SECTION-C Short Type Questions

9. “What may be development for one may not be development for the other. It may even be destructive for others.” Analyse the statement and give an appropriate example.

Ans. (i) Meaning of Development for Different People: This means that people have different ideas of development based on their needs and situations. What seems like progress for one group may create problems or even harm another

(ii) Example of Different Needs: A landless labourer in a village wants more work and better wages to support their family. But a rich farmer in the same village wants higher prices for crops. Both want development, but in different ways.

(iii) One's Gain, Another's Loss: Some development projects, like building a dam, can be helpful for farmers and industries because they get more water and electricity. But the same dam can force tribal families to leave their land, losing their homes and way of life.

SECTION-C Short Type Questions

10. What do you mean by public facility? Explain its importance.

Ans. i) Meaning of public facility-A public facility is the facility or services provided by the government or a public entity for the benefit of the community. like Health, Education, public transport etc.

ii) Contribution to a better life-Public facilities promote well being as they offer essential services as money alone cannot buy all the goods and services that may be needed to live well.

iii) kerala is more suitable for living-Haryana has more per capita income than Kerala but lags behind in basic public facilities like health and education and has a higher infant mortality rate than Kerala so it's important to have basic public facilities.

SECTION-C Short Type Questions

11. “We have not inherited the world from our forefather. We have borrowed it from our children”. Explain?

Ans. i) Unsustainable development-Since the second half of the twentieth century, a number of scientists have been warning that the present type, and levels, of development are not sustainable. We are using our natural resources beyond their capacity and it may negatively impact our environment.

ii) Limited and exhaustible resources-Some resources are fixed stock on earth which cannot be replenished so we need to use them sustainably. In case of groundwater, we use more than what is being replenished by rain, then we would be overusing this resource.

iii) Responsibilities towards future generations- There is a need to use resources wisely and sustainably so we can save it for the future generation as “We have not inherited the world from our forefathers. We have borrowed it from our children”.

SECTION-D Long Type Questions

(open ended)

12. Suggest some developmental goals for your locality or place you are residing?

Ans. Developmental goals aim to improve various aspects of society and the economy.

- i) Education , better and quality education for all through development of school and colleges, improving literacy rate.
- ii) Healthcare, access to quality and affordable health care services for all, reducing infant mortality rate and ensuring better nutritional status of people through Public Distribution System.
- iii) Employment, Creating job opportunities, improving workforce skills, and reducing unemployment rates.
- iv) Environmental Sustainability, Protecting natural resources like water from rivers, lakes, groundwater, reducing carbon emissions, and promoting renewable energy sources.
- v) Developing and modernising transportation, energy, and communication infrastructure.

SECTION-D Long Type Questions

13. How do we compare different countries? Is there any limitation in the attribute used by the World Bank to compare the countries? Explain.

Ans.

i) We compare different countries on the basis of their income, consider it to be one of the most important attributes of comparing different countries. Countries with higher income are considered more developed than countries with less income.

✓ ii) The World Bank released World Development Reports and classified countries into high income, low middle income and low income on the basis of countries' per capita income or average income.

SECTION-D Long Type Questions

iii) There are limitations in the attribute used by the World Bank to compare the countries for example

COMPARISON OF AVERAGE INCOME OF COUNTRY A & B					
COUNTRY	MONTHLY INCOME OF CITIZENS				AVERAGE
	1	2	3	4	
COUNTRY A	700	700	750	650	700
COUNTRY B	400	500	600	1300	700

iv) From the table it is clear that even though both the countries A and B have the same average income, country A is preferred because it has a more equitable distribution. In this country people are neither very rich nor extremely poor. On the other hand most citizens in country B are poor and one person is extremely rich.

v) So the average income is useful for comparison, it does not tell us how this income is distributed among people.
